Water Flow Tank Pump Fig. 1.4-6 Booster Pump w/ Tank 1.5 Multiple Tank Installation All tanks must have the same precharge for the system to function properly. Tanks should be installed on a header to ensure all tanks receive equal and balanced pressure. Adjust each tank precharge as detailed in section 1.3. The system pressure switch or control

EN INSTALLATION AND OPERATING MANUAL

• Valves control the flow of oil between tanks and other tanks, delivery barges and other sources. The most common type of valves are ball valves and gate valves. • Using a single common transfer pipeline for different products is a common practice. • The U.S. Coast Guard requires that transfer piping must be hydro-statically tested annually.

Aboveground Storage Tank Operator Handbook

c From the daily service tank the oil flows 3 in tanks in the double bottom from which it is pumped to a settling tank and heated. d A flow meter is fitted into the system 4 and a viscosity regulator to the engine-driven fuel pumps. e Booster pumps are used to pump the oil through heaters 5 high-pressure fuel to their respective injectors.

FUEL OIL SYSTEM - University of Rijeka

tank is more than 20' from the boiler, a two stage fuel unit should be installed in place of single stage pump supplied as standard equipment with burner. Make certain rotation and speed are same and pump is suitable for burner horsepower rating. • Oil line filter and shut-off valve should be installed in suction line.

After oil tank #3 and a LOT of asking around, I isolated the issue and have not had a problem since. Always check and change your oil when the engine is hot, or you risk exploding your oil tank. Just Google "Sportster exploding oil tank" and you will see I am not the only one that has had this issue.
