Calculus consists of performing calculations in a sub area of what real analysis proofs. Real analysis is therefore the theory behind why calculus works and much much more. It also generalizes the special cases considered in calculus. Large parts of real analysis also go way beyond what is being computed in a calculus course.

The theorems of real analysis rely intimately upon the structure of the real number line. The real number system consists of an uncountable set \mathbb{R} , together with two binary operations denoted $+$ and \cdot , and an order denoted $<$. The operations make the real numbers a field, and, along with the order, an ordered field. The real number system is the unique
