Engine Management Systems. Squeeze the most performance possible from your fuel-injected setup with an engine management system from Summit Racing. Explore engine control computers which tune, manage and regulate the input/output signals, as well as power adders on your vehicle's engine. Check out engine control systems from Holley, FAST, Chevrolet Performance, AEM, Ford Performance, among others, and choose the ECU best-suited for your application!

Engine Management Systems at Summit Racing

EMS stands for Engine Management System which consists of a wide range of electronic and electrical components such as sensors, relays, actuators, and an Engine Control Unit. They work together to provide the Engine Management System with vital data parameters. These are essential for governing various engine functions effectively.

Engine Management System (EMS) Working Explained-CarBikeTech

Upgrading your engine management system (EMS) from AutoZone not only guarantees maximum engine power, but it also ensures the lowest amount of exhaust emissions and the lowest fuel consumption. AutoZone has you covered with the latest engine control management system when it's time to upgrade your ride.

Engine Management for Cars, Trucks & SUVs

Speeduino was born out of a desire to create a completely open, super low cost programmable engine management system without any of the proprietary secrets getting in your way. Speeduino has been in development since 2013 and updates to both hardware and the firmware capabilities are made regularly.

An engine control unit, also commonly called an engine control module, is a type of electronic control unit that controls a series of actuators on an internal combustion engine to ensure optimal engine performance. It does this by reading values from a multitude of sensors within the engine bay, interpreting the data using multidimensional performance maps, and adjusting the engine actuators. Before ECUs, air-fuel mixture, ignition timing, and idle speed were mechanically set and ...

The performance and emissions that today's engines deliver would be impossible without the electronics that manage everything from ignition and fuel delivery to every aspect of emissions control. Electronics make possible V8 engines that deliver excellent performance, good fuel economy and produce almost no pollution.

Introduction to Engine Management Systems

The engine control module basically controls the intersection of the engine 's necessary ingredients to make energy -- fuel, air and spark. That sounds simple, kind of in the same way an engine itself sounds simple if you break it down into really basic terms.

Modern Engine Management Systems (EMS) use an oxygen sensor in the exhaust to monitor the air to fuel ratio (AFR). This information is then fed back to the EMS which will adjust the fuel flow to maintain the correct AFR. As a fuel injector develops deposits, the rate of fuel flow through it will decrease, and the AFR will be become lean.
