### Math Solving Inequalities Answer Key

Example 5 is a formula giving interest ( $I$ ) earned for a period of  $D$  days when the principal ( $p$ ) and the yearly rate ( $r$ ) are known. Find the yearly rate when the amount of interest, the principal, and the number of days are all known. Solution. The problem requires solving for  $r$ . Notice in this example that  $r$  was left on the right side and thus the computation was simpler.

Key Takeaways. Linear inequalities with two variables have infinitely many ordered pair solutions, which can be graphed by shading in the appropriate half of a rectangular coordinate plane. To graph the solution set of an inequality with two variables, first graph the boundary with a dashed or solid line depending on the inequality.

Solving Inequalities. Students learn that when solving an inequality, such as  $-3x$  is less than 12, the goal is the same as when solving an equation: to get the variable by itself on one side. Note that when multiplying or dividing both sides of an inequality by a negative number, the direction of the inequality sign must be switched.
