The economics of central station generation is largely a matter of costing. As with any other production technology, central station generation entails fixed and variable costs. The fixed costs are relatively straightforward, but the variable cost of power generation is remarkably complex. We will examine each of these in turn.

In August 1971 WPPSS began engineering work for its first nuclear plant (designated as WPPSS 2, it preceded the plant numbered as WPPSS 1). The Supply System predicted that the plant would be in operation by September 1977 and would cost less than \$400 million. However, in May 1981, as construction limped on, WPPSS predicted completion in 1984 at a
