Section Review 18-2 1. Species are classified into the same genus because they are closely related; that is, they share a more recent common ancestry. 2. Instead of grouping organisms only according to physical similarities, evolutionary classification also considers evolution-ary history. 3. Cladistic analysis considers only evo-

**Ch. 18 Answer Key**  
Modern Evolutionary Classification ● In a sense, organisms determine who belongs to their species by choosing with whom they will mate. ● Taxonomic groups above the level of species are “invented” by researchers who decide how to distinguish between one genus, species, family, or phylum and another.
