STAT 2006 Assignment 2 Suggested Solution 1. Let X_1, X_2, \dots, X_n i.i.d. $\sim \text{Bin}(1, p)$ where $0 < p < 1$. (a) $E \bar{X} = E \sum_{i=1}^n X_i / n = \sum_{i=1}^n E[X_i] / n = np / n = p$. Therefore, \bar{X} is an unbiased estimator of p . (b) $\text{Var}(\bar{X}) = \text{Var}(\sum_{i=1}^n X_i / n) = \text{Var}(\sum_{i=1}^n X_i) / n^2 = \sum_{i=1}^n \text{Var}(X_i) / n^2 = np(1-p) / n^2 = p(1-p) / n$. (c) $E \bar{X}^2 = E \sum_{i=1}^n X_i^2 / n^2 = E \sum_{i=1}^n X_i / n^2 = E \bar{X} = p$. Therefore, $\text{Var}(\bar{X}) = E \bar{X}^2 - (E \bar{X})^2 = p - p^2 = p(1-p)$. (d) Let $c = 1/n$.

Suggested Solutions to Assignment 2 Math 3242, Winter 2020 Q.1[4 marks] Burden et al. (i) p. 248 no. 5(b) Solve using the Double Trapezoidal Rule; (ii) p. 255 1(d) Solve using Simpson's Rule ($n = 2$). $\int_1^2 \ln(xy) dy dx$
The actual value of this integral is computed as $\int_1^2 \int_1^2 \ln(xy) dy dx = 1.718281828$
Using the Double Trapezoidal rule, $f(x, y) = \ln(xy)$, $a = 1$, $b = x$, $h = x - 1$. Then, $\int_1^2 \int_1^2 \ln(xy) dy dx = Z$
