programs in turtle geometry, where an unseen turtle moves and traces a path according to provided instructions. If only one move-turn pair is used, the size of the forward step will have no affect on the image. As an example, to draw a pentagon of side length 10, use one move-turn pair with 5 repetitions and set

A Direct2D geometry is an ID2D1Geometry object. This object can

be a simple geometry (ID2D1RectangleGeometry, ID2D1RoundedRectangleGeometry, or ID2D1EllipseGeometry), a path geometry (ID2D1PathGeometry), or a composite geometry (ID2D1GeometryGroup and ID2D1TransformedGeometry).

The turtle should now be higher on the screen, and there should be a line behind it indicating the path that it followed. The first turtles were actual robots that rolled along the floor. They got the name "turtle" because of the hard shells surrounding their delicate electronic innards.
