Wood Heater Flue Installation Guide

Installation Rules for

Download File PDF Wood Heater Flue Installation

Flue Pipes (also called stove pipe, smoke pipe, chimney connector, etc.) The rules provided here are based on the CSA installation code used in Canada. For the exact rules in your area, check with a local wood heat retailer, chimney sweep or building inspector.

Installation Rules for Flue Pipes - Wood Heat

Download File PDF Wood Heater Flue Installation

Most wood stove manufacturers list their stoves' maximum heat output per hour in British Thermal Units (BTU) - most popular stoves fall between 25,000 to 80,000 BTU. The average medium-sized house requires only about 5,000 to 25,000 BTU - in other words, the maximum output of a small stove or less - even during winter. [1]

How to Install a Wood Stove: 10 Steps (with Pictures

...

Don't be caught out!
All wood heater
installations are
regulated by Australian
Standard AS/NZS2918
and must comply with
Australian Standard
AS/NZS 2918:2001.
This stipulates that the
minimum flue height
must be 4.6m above
the floor on which the
wood heater is located.

Download File PDF Wood Heater Flue Installation

Therefore, unless the wood heater itself is over a 1000mm high, 3.6m of flue will make the installation of the wood heater non-compliant.

Making sure your wood heater is installed correctly ...

Installation of the stove pipe is the same as for vertical installation.

Start with the rigid sections and work from the stove to the wall.
