"Differential Equations with Boundary-Value Problems" gives excellent explanations and examples for the techniques required to write and solve DE problems. This book is particularly good because it includes more solutions steps in the examples than many textbooks. There are plenty of examples included in each topic.

Differential With Equations with Boundary-Value Problems 008 ...

In mathematics, in the field of differential equations, a boundary value problem is a differential equation together with a set of additional constraints, called the boundary conditions. A solution to a boundary value problem is a solution to the differential

u_1 is the solution of an associated Poisson problem with zero boundary data, and u_2 is the solution of the Dirichlet problem with the given boundary data. We have $E_{mn} = -4\pi^2(m^2 + n^2)^{-1}$.
