The branch of microeconomics that deals with household behaviour is called consumer theory. Consumer theory is built on the concept of utility: the economic measure of happiness, which increases as consumption of certain goods increases. What consumers want to consume is captured by their utility function, which measures the happiness derived from consuming a set of goods.

In consumer theory The more usual solution will lie in the non-zero interior at the point of tangency between the objective function and the constraint. For example, in consumer theory the objective function is the indifference-curve map (the utility function) of the consumer. The budget line is the constraint.
